Task description

Practice ScrollViews, Lists and ForEach loops from episode 4 by replicating this screen! Both the ScrollView and the list contain 20 Views, however this should work for random number of elements.

Stacks used: ZStack, VStack, HStack

View modifiers used:
.foregroundColor
.frame
.font(.system(size:))
.padding

Shapes used:
Circle

SF symbols used:
In the List, the numbers in circles are SF symbols.
0.circle, 1.circle, 2.circle, 3.circle…
Tip: Use the variable inside the ForEach loop to render them!

Bonus:
Introduce this array of colors in the ContentView:

```
let colors: [Color] =
[.red, .blue, .orange, .yellow, .pink,
 .black, .purple, .green]
```

After that you can use the **randomElement()** function as a foregroundColor for each View.

Solution is available in file **Solution.swift**

Good luck!
